

## Compiere® ERP Connector for Salesforce

*Integrate. Automate. Synchronize.*

*Compiere ERP Connector for Salesforce enables timely and accurate information for Sales and Finance by automating data updates between Compiere ERP and Salesforce.com. Bi-directional synchronization of key information between the two systems improves sales efficiencies and customer service, as well as accelerates opportunity-to-cash.*

### AUTOMATED UPDATES

Compiere ERP Connector for Salesforce streamlines lead tracking, sales order processing and related financial processes by eliminating redundant and error-prone manual data-entry. Utilizing Web services as the integration method between Compiere and Salesforce.com, the Connector automatically updates accounts, customer orders and invoices between both systems. The Connector is certified by Salesforce.com based on its quality standards.

### BI-DIRECTIONAL SYNCHRONIZATION

Compiere ERP Connector for Salesforce provides bi-directional synchronization of your Salesforce.com and Compiere ERP applications' business data. Whether you are updating Salesforce.com or Compiere ERP, the Connector transfers information from one system to the other seamlessly. As an example, the Connector can transfer information about sales orders and invoices from Compiere to an existing account in Salesforce.com, or initiate account creation in Compiere ERP as soon as an opportunity is closed won in Salesforce.com.

This results in more effective sales execution and accelerated order fulfillment.

### COMPLETE TRACEABILITY

Compiere ERP Connector maintains the synchronization details on both Salesforce.com and Compiere ERP to ensure traceability and accountability. When information is added or updated, the account and transaction details are logged, along with date and time of synchronization. You are now able to audit the log files to track the who, what or when of any changes that have been made.

### EASY SETUP

Built with Compiere's unique and intuitive dynamic Web services model, Compiere ERP Connector for Salesforce is easy to setup. Using an intuitive, Web-based user interface, your Salesforce.com administrator can quickly set synchronization parameters, such as processing frequency and schedule, conflict resolution rules, and transaction lifespan. Once the setup is complete, the synchronization process runs without further user intervention.

## DATA SHEET

### Compiere ERP Connector for Salesforce Benefits

#### ACCELERATE ORDER FULFILLMENT

- Automatically initiate account creation in Compiere ERP after an opportunity is closed won in Salesforce.com
- Leverage fully-automated account approval and initiation of order fulfillment process using Compiere ERP workflow

#### IMPROVE OPERATIONAL EFFICIENCY

- Streamline the lead-to-invoice process with the bi-directional Connector
- Eliminate the need to create new accounts in both systems
- Provide a single entry to update both systems

#### IMPROVE SALES EXECUTION

- Obtain accurate and up-to-date information on accounts
- Get instant visibility to an account, order status and history

Developed for Compiere by **Estuate**, a Compiere Development Partner.
